06 October 2016

Logitech announces a successor to the popular C920 webcam-- the C922 Pro Stream, a webcam able to record 1080p resolution video at 30fps or 720p at 60fps, with dynamic background replacement via Personify software.

Designed for "serious" streamers, the webcam is compatible with broadcast software such as OBS and XSplit, which is comes included in the package in the shape of a 3-month premium license. This allows users to overlay video of themselves on top of the game stream.

In addition the C922 also offers automatic low light correction, sharp autofocus, flicker lighting adjustment and a pair of omnidirectional noise canceling microphones for stereo audio with no-drop streaming.

“Social video platforms such as Twitch have exploded in the past few years, and with more than 2 million streamers on that platform alone, the way this new generation of gamers play and learn about games has forever changed,” Logitech says. “With the C922 Pro Stream Webcam, we are taking game casting to the next level so you can easily broadcast your gameplay like a pro, better engage with your community, and stand out from the crowd.”

The C922 webcam is available now.
