

The AOC I1659FWUX is a portable 16-inch monitor featuring 1920 x 1080 resolution, USB 3.0 connectivity and a stand allowing customers to use it in either landscape or portrait mode.

The monitor features a glossy piano black plastic case, and carries an IPS panel with 60Hz refresh rate, 700:1 contrast ratio and 160-degree viewing angles. As mentioned earlier the stand allows either landscape or portrait use, and an auto-rotation feature is built-in.

Power and data come through single USB 3.0 cable, meaning the monitor needs no additional power adapter. AOC says power consumption clocks at 0.5W standby and 8W typical, and as a result it uses a Y cable to split the load across two USB ports. Use also requires installation of a driver and DisplayLink software (compatible with Windows and MacOS PCs).

The I1659FWUX is available now.
