

AOC Intros V2 Slim Monitor Series

Written by Alice Marshall
05 July 2018

AOC presents the V2 monitor series with a choice of 3 sizes-- the 21.5-inch 22V2Q, the 23.8-inch 24V2Q and the 27-inch 27V2Q-- all "as slim as a smartphone" and with the same 3-sided frameless design.

The monitors carry a 1920 x 1080 resolution IPS panel with WLED backlight, wide viewing angles (178°/178°) and 72% NTSC colour gamut coverage. Also on offer is a quick 5ms response time, 75Hz refresh rate and AMD FreeSync support, together with technologies such as Flicker-Free (regulates brightness with DC instead of pulse width modulation) and a Low Blue Mode reducing blue wavelengths.

Connectivity comes through HDMI 1.4 and DisplayPort 1.2, and a 3.5mm headphone jack is included. The monitors sit on a removable metal stand with 20° of tilt adjustment. Customers can easily manage multi-monitor setups through AOC Screen+ software, and the monitors adhere to the EPA 7.0 regulations.

The V2 monitor series will be available from July 2018.
