

A USB-Fed Monitor

Written by Marco Attard
19 January 2011

Green House's GH-USD16K is a 15.6" LCD monitor that's USB 2.0-based-- receiving image and power from just one port, thanks to its low 5W power consumption.

It handles a 1366 x 768 resolution with a 400:1 contrast ration.

One can also daisy-chain up to 6 of the monitors to a single PC.

Also included is a removable folding stand.
