ViewSonic announces the V3D245, the 24" addition to its 3D-ready monitor range.

It carries a 1080p LED-backlit panel together with a built-in nVidia 3D Vision wireless emitter, while the package includes a pair of 3D Vision glasses.

The display comes with 120Hz refresh rate, 2ms response time, brightness at 300 nits and contrast rates of up to 20000000:1.

It is also HDMI 1.4 compatible and HDCP enabled, and audio comes via built-in SRS Premium Sound speakers.

ViewSonic says the V3D245 should be available by August 2011.
