Sony will soon start shipping the first Playstation-branded 3D Display, a 3D monitor aiming for gaming use with SimulView, a different display take on 2 player gaming.

The 24" active 3D display comes packaged with 1 pair of 3D glasses, an HDMI cable and a copy of the MotorStorm Apocalypse game, and offers Edge LED backlighting, 240Hz refresh rate and an integrated subwoofer.

Inputs includes x2 HDMI 1.4 and component, plus stereo headphone output.

The big feature Sony is pushing is SimulView-- a 2 player function giving each player a full 2D screen while wearing 3D glasses. The feature is exclusive for the 3D display, and is currently compatible with the games MotorStorm Apocalypse, Gran Turismo 5, Killzone 3, and Super Stardust HD.
