

V7 introduces their first 24 inch widescreen LCD monitor. The D24W33 has good specs (especially for a 399 Euro model): a brightness of 250 cd/m<sup>2</sup> , a resolution of 1920 x 1200 pixels, and a contrast of 1,000:1.

But it's not all about specs, is it? Demand for large displays in widescreen format has increased because of the new Windows Vista OS. This widescreen monitor comes with show-boating pivot function that graphic artists, CAD specialists and others need several applications shown on the screen at the same time.

The 24 inch, panorama format is suitable for both home and the office area. With its black casing, D24W3 could become the “pivotal point” of any surroundings.
