

HD Music Systems, Music OS from Olive in 2013

Written by Marco Attard
21 November 2012

Following a recent sale Olive announces an updated music server lineup for launch during 2013-- the 4HD and 5HD Music Systems and the next-gen 6HD Music Server.

The 4HD and 5HD carry 32-bit/384kHz TI Burr-Brown Digital-to-Analog converters and dual HD amplifiers. The 6HD has a fully balanced differential DAC design with x2 Burr-Brown PCM1792A and a linear high-precision power supply with custom toroidal transformers.

Connectivity comes through the wireless HD docking station, integrating music streaming services (Spotify, Pandora) and content from iOS/Android devices, PCs, Macs or NAS.

Powering the three systems the new Music OS-- a touchscreen-based interface promising better animation and complete UI customisation options.

The HD Music Systems are available in 2TB capacity. The 4D ships in high-gloss white, while the 5HD and 6HD come in an anodised finish as well as a built-in CDRW system.
