A Server for the Biggest Collections

Written by Marco Attard

Even customers with the biggest of movie collections will find it difficult to fill up the FilmoScope DX-- a server with a disk capacity expandable to a maximum of 256 terabytes.

The server comes with standard storage of 14TB to store movies and albums as a single collection, and is compatible with DUNE, TWIX, Xtreamer and Popcorn Hour media players as well as players from FilmoScope Lab itself.

FilmoScope also provides DX-series servers with optional built-in 4 or 6 TI multi-zone audio, handling up to x4 audio streams. Multiroom functionality can be either independent (in combination with an 8-12 channel amp) or part of a Russound or Nuvo system.

TI audio functionality also allows for server control via wall panels or iPhone/iPad apps.
