

Low Cost Intel PC Platform Comes to Europe

Written by Bob Snyder
26 March 2008

Computer makers in Europe will sell a 2nd-generation version of the Intel-designed Classmate PC for about 300 euros.

Intended as kiddie PCs, their arrival in the market will fuel the low-cost computing movement.

The new, low-cost laptops developed from Intel technology will run on Windows. Intel says makers in India, Mexico and Indonesia already sell Classmate PC laptops to retail clients.
