---

Green is in and one maker thinks it has the answer for all the laptops and MIDs out there. JJI Technologies showed at CeBIT a new material that's economical, more than just RoHS and WEEE compliant, easy to assemble, and non-toxic even if it's set on fire.

**PolyFR™** compound is a non-halogen flame retarded polypropylene compound designed for use in applications where UL-94 V-0 performance is required. It has outstanding low temperature impact strength, tensile properties and leading edge electrical performance. It is recyclable.
