

HP Spectre Line Gets AIO Addition

Written by Marco Attard
12 September 2012

HP adds the first non-laptop product to the high-end Spectre family-- the Spectre One, an All-in-One (AIO) PC with a 23.6-inch display just 11.5mm thick.

The slim aluminium display comes at a price though. Unlike most newly-launched AIO PCs using the touch-friendly Windows 8, the Spectre One lacks a touchscreen.

HP still caters for customers wanting multitouch input, mind-- the Spectre One includes a wireless Apple-style touchpad, as well as a wireless keyboard.

Powering the Spectre One are Intel Ivy Bridge CPUs and a 1GB Nvidia graphics card. Further features include NFC connectivity (via x2 tags in the base), x4 USB ports, HDMI-in and Beats Audio technology.

HP also has other AIO PCs on offer-- the Envy 20 and 23 TouchSmart (with 20- and 23-inch touchscreens respectively) and the lower-end non-touch Pavilion 20.
