

LG Intros Windows 8 Duo

Written by Marco Attard
23 October 2012

LG announces its Windows 8 portfolio ahead of the Microsoft OS launch-- a device range consisting of All-in-One PC and (now obligatory) tablet-laptop hybrid.

The V325 AIO PC has a 23-inch touchscreen (with 10-point multi-touch support), Core i5 processor and Nvidia GeForce GT640M graphics. It also carries a TV tuner users can access on without having to power up the whole PC.

Meanwhile the H160 is perhaps a bit more interesting-- an 11.6-inch hybrid device with a slide-out (accessible via auto-slide button) keyboard. It is 15.9mm thick, weighs 120g and carries USB/HDMI ports and a micro SD card slot.

LG gives no mention of a European release for the 2 devices, which should hit the Korean market with the Windows 8 launch.
