28 November 2012

Lenovo claims it has the smallest desktop PC with the IdeaCentre Q190-- a mini PC less than 1 inch thick (excluding Blu-Ray/DVD player add-on) ideal for home theatre applications.

It runs on Windows 8 and carries a maximum Core i3 processor, 1TB HDD, 8GB RAM and integrated Intel graphics, giving it enough power to smoothly support home theatre essentials such as 7.1 surround sound and HD video.

An optional Blu-ray player also provides 3D video playback.

Lenovo also includes couch-friendly control with a wireless mouse and wireless multimedia remote with built-in mini backlit keyboard.

The IdeaCentre Q190 starts shipping from January 2013.
