

HP Embeds Leap in More PCs

Written by Marco Attard
11 December 2013

Following the launch of the Envy 17 Leap Motion SE laptop HP integrates gesture-based input technology in 11 desktop and all-in-one (AIO) PCs, all armed with a keyboard featuring built-in Leap Motion sensors.

Available separately as the HP USB Leap Motion Keyboard, the keyboard carries an embedded micro sensor only 3.5mm thick. Select HP PCs also ship with pre-installed Airspace and Leap Motion software, together with free bundled apps.

Users can buy more apps through the online Airspace Store.

[Leap Motion technology](#) tracks movements to 1/100mm with no visible lag time. The controller has a 150-degree field of view and tracks individual hands and 10 fingers at 290fps, allowing control of both OS and customised software.
