

LG Puts ChromeOS in AIO

Written by Marco Attard
18 December 2013

LG reveals a desktop PC running on ChromeOS-- the Chromebase (Model 22CV241), the first all-in-one (AIO) PC running on Google's cloud-based operating system complete with 21.5-inch IPS display.

It is actually the second desktop ChromeOS machine we recall, the other being the [Mac Mini-style Samsung Chromebox](#).

The Chromebase promises "the successful combination of simplicity, power and great design" if with fairly modest specs-- Intel Celeron CPU, 2GB RAM, 16GB SSD, 1.3MP webcam and built-in 5W speakers as well as a complement of ports (including HDMI-in).

Like all other machines running ChromeOS it offers a variety of web apps, automatic updates and built-in security.

It officially launches at CES 2014, and should hit the market sometime during Q1 2014.
