Following the [Model B+ upgrade](#) the Raspberry Pi micro PC gets a lower-cost (\$25) variant--the Model A+, a smaller (65mm long) version featuring the same BCM2835 application processor and less power consumption.

It carries 256MB RAM and many of the improvements found in the Model B+, including the 40-pin general-purpose input/output (GPIO) header, a push-push microSD card slot and an audio circuit with a dedicated low-noise power supply.

The GPIO header allows for more compatibility with add-on boards, as it is HAT standard compatible.

The Raspberry Pi Model A+ is available now in the UK.
