

Hannspree Claims "Smallest Computer"

Written by Marco Attard
22 January 2015

Hannspree launches the pocket-size Micro-PC-- an HDMI-enabled PC on a stick (the smallest around, at least according to the company) complete with Windows 8.1 and touchscreen functionality for touch-ready displays.

Available as either a stick or as part of an All-in-One (AIO) PC bundle with a selection of HannsG touch monitors, the Hannspree Micro-PC carries a quad-core Intel Atom CPU, Intel HD Graphics (clocked at either 311Mhz or 646MHz in burst frequency mode), 2GB DDR3 RAM and 64GB storage inside a casing 11cm long and 40g heavy.

Further storage comes through microSD, while micro USB and regular USB ports allow for further expansion. Wifi and Bluetooth radios provide wireless connectivity.

The Hannspree Micro-PC is available now.
