Computer chassis maker In Win presents the 509 Full Tower PC Chassis-- a chassis featuring an edge to edge tempered glass panel on the left side and an interesting honeycomb mesh vented design on the right.

Designed for gaming PCs, the 509 comes in both standard and ROG-certified livery. The honeycomb design provides both visual appeal and cooling, together with the vents/perforations on the underside and back. Further cooling comes through 4 areas for the mounting of 360mm radiators (front, sides and middle), with the front space fitting both a triple fan radiator and a pump/reservoir combo.

Users not wanting liquid cooling can use the multifunction brackets to fit 120mm fans or 2.5-inch SSDs.

The inside of the 509 fits up to E-ATX motherboards, and is compatible with ATX, Micro-ATX and Mini-ITX compatible. It also has space for graphics cards up to 370mm long, has 8 slots in the back and offers graphics card support brackets to prevent GPU droop/PCI-e slot distortion.

For storage an EZ-Swap HDD caddy handles up to x3 3.5-inch HDDs, and the front can accommodate a single 5.25-inch ODD drive or similar. Beneath the 5.25-inch bay and power bottom area are x4 USB 3.0 and HD Audio ports.

In Win is still to tell when the 509 chassis will be available.
