PC case maker In Win presents the 301-- a Micro ATX minitower PC chassis targeted at gaming and performance enthusiasts wanting a machine with a smaller form factor.

Based on the "premium affordable" In Win 303 ATX chassis, the 301 is an even more compact option, measuring 365 x 205 x 370mm. Construction is in 1.2mm SECC steel, with a tool-less push button release tempered glass side panel and the same hexagonal ventilation design as the 303.

The front of the chassis has x2 USB 3.0 ports and HD audio I/O, while the inside has one 2.5-/3.5-inch bay, two 2.5-inch SSDs and four PCI expansion slots. On the cooling side it has enough space for both 240mm plus 120mm water cooling radiators at the front and rear, and one can fit two 120mm fans in the chassis base.

In Win says one can also fit a Mini-ITX board in the 301, while the chassis offers detachable cable management, a graphics card support bracket and a dust filter over the intake vents. CPU cooler and graphics card space clocks at 158mm tall and 330mm long, and a top compartment houses the PSU.

The 301 chassis comes in either black with red trim or white with a blue trim.
