

EVGA Continues GTX 1070 Ti SKUs

Written by Alice Marshal
07 December 2017

EVGA announces a 5th take on the Nvidia GTX 1070 Ti- the EVGA GTX 1070 Ti FTW Ultra Silent Gaming, a card featuring "cool, silent running and game-changing performance."

To cover the "cool" and "silent running" parts of the above claims the card features a 2.5 slot design with a larger, thicker heatsink compared to other EVGA offerings, including those with ACX 3.0 cooling and FTW enhancements. Such size minimises active cooling, keeping things relatively silent. It also features 10+2 power phases, 8+8-pin connectors, 235W power ceiling and two BIOS chips for simpler overclocking.

On the software side the included Precision XOC tool allows customers to optimise overlocks with a "click of one button" by quality-checking graphics output. The software scans the graphics card to find optimal overclock settings before the user saves the settings for "ultimate gaming."

The EVGA GTX 1070 Ti FTW Ultra Silent Gaming is available now on a preorder basis.
