PC component maker InWin takes to CES 2019 with a larger chassis option-- the 928 Super Tower, an aluminium and glass case designed to fit big motherboards, specifically the ROG Dominus Extreme X599.

The ROG Dominus Extreme X599 measures 35.5 x 35.5cm, and is designed to fit the upcoming 28-core Intel Xeon W-3175X CPU. As such, it needs a big PC case, bringing about the InWin 928 Super Tower. The chassis has enough space to support up to x4 vertically mounted graphics cards (even if the package includes just one PCIe riser cable), x12 fans, x2 radiator mounts and x2 high-wattage power supplies.

In all, the case can carry graphics cards measuring up to 480 x 190mm, as well as CPU coolers up to 185mm tall. On the storage side, it offers mounts for up to six 2.5-inch or two 3.5-inch drives, and the X599 offers space for three M.2 SSDs and multiple PCIe add-in cards.

Also on show at CES is the InWin 905-- a gaming chassis with support for "more water-cooling options and longer power supplies" compared to the 904. Another addition is a one-button access side panel plus RGB lighting synchronisation features.
