---

Alphacool combines a CPU water cooling block, pump and reservoir into a single product-- the Eisbaer Solo, a compact piece of hardware the company says is compatible with most standard liquid cooling gear.

The Eisbaer Solo uses the DC-LT Low Noise Ceramic Pump found in many Alphacool products, with 4W power consumption and performance reaching 2600rpm. It has a 0.85m delivery head with a 70L/h maximum flow rate, while the reservoir features standard G1/4" threads for compatibility with "all standard water cooling connections. The reservoir is filled via the fill port on top of the housing, enabling quick cooling management.

In addition, copper CPU plate with "very fine cooling fins" ensures cooling performance. The entire package measures 63 x 63 x 68mm, and includes both an Intel mount and AMD bracket to ensure compatibility with all modern CPU sockets, including Intel 775, Intel 1366, Intel 1150/1151/1155/1156, Intel 2011-3, AMD AM4, AMD AM3+/AM3/AM2+/AM2/939/FM2+/FM2/FM1/G34/940.

The Eisbaer Solo is available now.
