The Ultra-Small ECS LIVA Q2 Mini PC

Written by Frederick Douglas
 06 March 2019

Taiwanese PC hardware maker ECS launches the LIVA Q2-- a tiny mini-PC the size of a mouse yet still capable of powering 4K visuals through an Intel Pentium Silver/Celeron processor with integrated Intel HD 600 series graphics.

Ideal for various applications, including home entertainment, smart offices and even digital signage and smart retail solutions, the LIVA Q2 runs on Windows 10 and decodes HEVC 10-bit media through a revised video engine. An HDMI 2.0 output complete with CEC allows users to control the connected display.

Further features include 2/4GB RAM, 32/64GB eMMC storage (expandable to 128GB via microSD card slot), dual-band 2.4 + 5GHz wifi, Bluetooth connectivity and an internal fan promising to keep the internals cool and reliable.

The LIVA Q2 is available now.
