In Win launches the 928 Super Tower-- a premium PC case in 4mm brushed aluminium featuring dual tempered glass sides, addressable RGB lighting zones and support for up to 14-x 14-inch Xeon motherboards, dual PSUs and dual GPUs.

First seen back at CES 2019, the 928 Super Tower is, as the name might suggest, a big chassis. It measures 582 x 337 x 668mm and weighs 23kg unpopulated, and fits just about any Xeon, EEB, E-ATX, ATX, Micro-ATX or Mini-ITX motherboard. Being so large, it has space for up x8 PCie slots plus x3 vertical PCI cards (one PCIe riser cable included), plus x6 140mm cooling fans in the top, x3 in the front and x2 in the rear. Customers can also add water cooling radiators up to 420mm long and 45mm tall.

On the storage side, the case fits up to x6 2.5-inch drives with a provision for x2 3.5-inch drives. It can hold GPUs up to 480mm long (or 335mm with a GPU holder), 190mm wide and 80mm tall, plus a 185mm CPU heatsink and, as mentioned earlier, a pair of PSUs up to 250mm in length. The front panel offers access to I/O, with x1 USB-C and x2 USB 3.0 ports plus HD audio connectors.

The 928 Super Tower is shipping now, at least in the US.
