

Cooler Master Intros MasterCase H100

Written by Frederick Douglas
10 July 2019

Cooler Master announces the European launch of the MasterCase H100, a compact mini-ITX chassis customers can configure as a portable gaming rig (complete with built-in handle) or miniature living room PC.

First announced back in May at Computex 2019, the H100 carries a large 200mm RGB fan within a recessed mounting. The front panel and part of the top panel feature Cooler Master Fine Mesh, a means to filter out dust, allows for unrestricted ventilation and makes for easier cleaner and maintenance. In total the chassis measures 312 x 216 x 301mm, with construction in steel, plastic and steel mesh.

While small, the H100 supports up to x4 SSDs or x1 HDD plus x3 SSDs. It also supports a range of ITX graphics cards up to 210mm in size CPU coolers up to 83mm and 210mm PSUs, and the full-size ATX power supply can handle varying configurations. The package also includes an RGB controller, and in case the motherboard does not support the RGB control function, customers can control the lighting via the reset button.

The H100 is shipping now.
