Taiwanese PC component maker Biostar announces the H310MHP-- a micro-ATX form factor motherboard with support for the latest 9th and 8th generation Intel Core, Pentium and Celeron processors.

Described as the "little motherboard that can" by the company, the H310MHP is aimed at customers wanting something a little less flashy compared to a flagship product. It supports up to 32GB of 2666MHz DDR4 RAM, GbE LAN and HDMI, and offers up to x6 USB ports for the connection of multiple devices. A 5-phase power delivery system and an 8-pin CPU power connector ensure even high-end CPUs get stable power.

The rear I/O of the motherboard includes x1 PS/2 keyboard/mouse port, x1 VGA port and x1 HDMI port. Also included are x1 ethernet, x2 USB 3.1 Gen 1 ports, x4 USB 2.0 ports and x3 audio jack, all in a package fitting even the most discrete cases.
