

EKWB and InWin Team Up in PC Case

Written by Alice Marshall
28 November 2019

EK Water Blocks and InWin announce a collaboration in PC cases-- the EK-Classic InWin 303EK, a "unique version" of the In Win 303 case featuring the addition of an integrated distribution plate.

According to the two companies, the 303EK is the only mass-produced case re-designed and modified to seamlessly integrate a coolant distribution plate complete with DDC 3.2 pump. The integration distribution plate allows customers to easily install hard tubes without need to bend the tubing, making for an all-in-one solution fitted with multiple industry-standard G1/4-inch threaded inlet and outlets.

Powering the pump is a 12V Molex connector, and users can adjust pump speed via standard PWM cable attached to the motherboard or controller. The case supports one CPU and up to two GPUs (up to 350mm long and 160mm wide) together with a top-mounted radiator. It

measures 215 x 487 x 480mm, and fits ATX, Micro-ATX and Mini-ITX motherboards plus an ATX12V power supply up to 200mm long.

The 303EK case is set to ship on January 2020.
