VIA demos its Zotac ZBox mini-PC at Computex 2011-- with a 12 x 12 x 4cm chassis, small enough to fit in one's palm.

The miniature size factor appears to make it ideal for customers of a home entertainment system or simply are lacking in general space.

It carries VIA's own Nano X2 dual-core processor, in either 1.2GHz or 1.6GHz models. The processors have native 16-bit software support, VT CPU virtualisation technology and VIA PadLock hardware security features.

Nano X2 processors are also pin-to-pin compatible with earlier VIA processors, facilitating any upgrading customers might require.
