With Windows 8 aiming at more touch-friendly devices, it makes sense for Lenovo to launch the C325-- an all-in-one desktop PC with a multitouch display.

It carries a 20" 1600x 900 LED backlit display (also available as non-touchscreen), dual-core AMD E450 processor, integrated Radeon HD 6320 graphics, 8GB RAM, 1TB HDD, webcam and built-in DVD writer.

Lenovo also includes the IdeaTouch touch-optimised application package, and the Eye-Distance and Dynamic Brightness System automatically adjust monitor brightness according to ambient light conditions and how close the user's face is to the screen.
