SanDisk announces the Ultra Fit, a USB 3.0 flash drive promising "exceptional performance" within a form factor so small "you hardly know it's there."

The Ultra Fit line follows on the SanDisk Cruizer Fit series with an updated design, as well as improved performance for the moving of media between devices. Read speeds clock at up to 130MB/s, while SecureAccess software provides security with password protection and 128-bit security.

Write speeds differ between drives of different capacities-- the 16GB drive reaches 20MB/s, while the 32 and 64GB models reach 40MB/s.

Also included is a 1 year subscription to the RescuePRO lost and corrupted file recovery service.

The Ultra Fit USB 3.0 flash drive is available now in 16, 32 and 64GB capacities.
