

Seagate Wireless Storage at CES 2015

Written by Marco Attard
07 January 2015

Seagate launches the Wireless at CES 2015-- a 500GB portable wireless (hence the name) drive the company says is designed to provide further storage the users of all mobile devices.

It is compatible with all iDevices, as well as Android and Windows 8/RT smartphones and tablets, via companion Media app. Setup simply involves connecting devices to the drive via wifi. Once connected it also handles the sharing on content on smart TVs and STBs over Apple Airplay or the Google Chromecast.

Seagate adds the Media app also includes an auto backup feature for the creation of secondary copies of photos and videos, while the drive's battery lasts for up to 6 hours on a single charge.

The Seagate Wireless is available from January 2015 once CES is over.
