

The Reflective LaCie HDD

Written by Marco Attard

The LaCie Mirror is an external HDD with a rather self-descriptive name-- after all, the USB 3.0 storage device is covered in mirrored Gorilla Glass, making it reflective as well as rugged and scratch-resistant.

Designed by French industrial designer Pauline Deltour, the Mirror comes complete with an ebony wood display stand, making it a decorative object as well as a means to store one's files. Or, as Deltour puts it, "it's first an elegant and functional object, and only on second glance is it revealed to be a slim and high-performance hard drive." Indeed.

As for actual specs, the Mirror offers 1TB capacity and ships with LaCie Backup Assistant and LaCie Private-Public AES 256-bit encryption software.
