10 March 2016

Storage solutions vendor G-Technology announces the G-Drive Mobile USB-C-- an external HDD featuring USB-C connectivity and a thin, beveled aluminium case in gold, space grey or silver colours.

G-Drive Mobile USB-C carries a 7200 RPM HDD, for transfer rates reaching up to 136MB/s. Being backwards compatible with other USB formats, the drive ships with one USB-C to USB-C cable and one USB-C to USB-A cable, while free G-Technology Windows Format software allows Windows users to easily reformat the drive.

“From our highly flexible Evolution Series and sleek black G-SPEED line to our new colorful USB Type-C portable drives, we always strive to deliver quality, performance and style,” G-Technology says. “Getting consumers to backup and protect their stuff can be difficult, but we hope that our new fast and stylish G-Drive Mobile USB-C and high-capacity G-DRIVE mobile USB 3.0 drives will encourage people to safeguard their most valuable personal data.”

The G-Drive Mobile USB-C drives are available now in 1 and 2TB capacities.
