

LaCie Intros Thunderbolt 3-Ready Raid3

Written by Marco Attard
02 November 2016

LaCie has a storage solution ready for the users of high-end laptops such as the latest MacBook Pro-- the Bolt3, an external HDD featuring two Thunderbolt 3 ports.

Providing the actual storage inside the Bolt3 is a pair of M.2 PCIe SSDs making a single 2TB volume. LaCie claims transfer speeds reach up to 2800mbps, making the drive ideal for 4K and even 6K video editing. Thunderbolt 3 allows for the daisy-chaining of either one USB-C or up to five Thunderbolt 3 devices, and users can also connect two 4K displays and a laptop simultaneously.

The external casing is built in aluminium and comes complete with a magnetic cable door and a removable display stand for propping the HDD up on a desk.

The Bolt3 should be available on Q3 2016.
