Western Digital launches what it says is its highest-capacity storage system yet-- the My Book Duo, a desktop RAID system featuring capacity reaching up to 20TB.

The My Book Duo connects to PCs via USB 3.1, and provides performance reaching up to 360MB/s sequential read via USB-C port. For compatibility with older machines and connection of additional accessories (including drones, action cameras, card readers, keyboards, mice, USB drives or phones) it also features with two USB 3.0 Type-A ports.

WD adds the firmware is RAID-optimised, making it "perfect" for two-disk array systems with drive operation auto management, helping ensure read/write cycle data integrity. Security is also included in the shape of password protection and 256-bit AES hardware encryption with built-in WD Security software.

"Both at home and in the office, people are creating and amassing huge volumes of data, and need high capacity, high speed solutions to easily and confidently move and store that data in a single location," the company says. "We see it within new content creation segments such as the drone market and with enthusiasts, as well as professionals, producing and editing massive, high-quality photo and video files. There has never been more of a need for a simple-to-use, massive capacity desktop storage solution such as My Book Duo for these content creators to keep pace with their growing storage demands."

The My Book Duo is available now in 4, 6, 8, 12, 16 and 20TB capacities.
