Customers wanting to build a compact gaming PC get a suitable chassis courtesy of Dutch hardware maker X2-- the Spartan (X2-OR7018G/W-U3) is a portable case made to fit ATX and micro ATX mainboards.

While small, the Spartan fits up to three cooling fans, with space for two 120mm fans in the front and one 80mm fan in the rear. Further aiding cooling is a bottom partition housing the power supply, ensuring better airflow and lower temperatures. For further cooling customers can also add a radiator up to 240mm in size, and the case fits GPUs up to 280mm long and CPU coolers up to 160mm high.

Behind the tempered glass front panel is cool-looking mesh, and the left panel is also in glass to show off RGB lighting and hardware. The case also includes x1 USB 3.0, x1 USB 2.0 and x1 HD-AC97 audio ports at the top front for easy plug and play access.

The Spartan case is available now.
