Windows' lack of native Blu-ray playback support might make life difficult for your media-consuming customers-- but now iDeer updates its Blu-ray player software (v1.2.6) with Windows 8 support.

According to the company the software is the first compatible with the latest Windows version, and comes complete with authorisation from the Blu-ray Disc Association (BDA).

The iDeer Blu-ray player also supports other formats (including CD, MOV, AVI, FLV, WMV, MP4, MPEG, AAC and AC3) and is available with a lifetime upgrade license allowing installation on both Windows and Mac PCs.
