Customers wanting media server software for their WD NAS storage systems are getting exactly that, as the company announces the the Plex Media Server app is now available for the My Cloud NAS series.

Plex is a popular media organisation and streaming software. It is available for most PC and NAS devices, and comes with a companion client app allowing media playback on Windows, Android, Chromecast, Xbox and PlayStation devices, as well as a number of STBs and smart TVs.

"With today's addition of the Plex app, the My Cloud NAS series will now be a one-stop shop to not only store and protect your most precious content, but to organize and stream that content to all your devices as well," the company says.

The Plex app is compatible with the My Cloud Mirror, EX2/EX4, EX2100/EX4100 and DL2100/4100. It features built-in DLNA support and promises "effortless" media sharing and organisation.
