Paragon releases Hard Disk Manager 11 Professional, a data management software uniting all HDD lifecycle maintenance and management tools for office and home PC users.

It performs system migrations, drive partitioning, disk imaging, file system optimisation, data sanitisation and boot management, while also being open to Boot Camp users.

Its data safety and disaster recovery tools handle both physical and virtual Windows environments, and it includes Paragon Connect VD, which works with virtual disks as if they were physical.

The software is also AFD and USB 3.0 ready, and Paragon says its updated wiping technology disposes of data from any HDD, SSD, flash-drives and laptops.
