

Will Nero Deal Open Europe to TiVo?

Written by Bob Snyder
14 October 2008

American favorite TiVo moves from set-top box to the PC with a deal that brings TiVo functions to PCs using Nero's LiquidTV package.

Nero LiquidTV/TiVo PC will allow users to burn DVDs and carry their recorded content with them. (e.g., take TV shows on a plane trip or car ride).

The device targets the road warrior, college student and existing TiVo user (hardly any in EMEA outside UK at moment).

LiquidTV/TiVo PC is available in No. America but will not expand into Europe until 2009.
