

CeBIT Offerings from Hanvon

Written by Marco Attard
02 March 2011

Hanvon will show off its full product range at CeBIT 2011-- including e-readers, graphic tablets, tablet PCs and biometric solutions.

First off are Hanvon's WISEreaders-- one with a large 200dpi resolution screen, and another with a colour screen. Both carry a 9.7" e-ink display, wifi/3G support and even business office software. User input comes through pressure sensitive electromagnetic pen, allowing for document modification.

Hanvon's Art Master III is a graphics tablet employing 2048-level pressure sensitivity, making it ideal for digital creatives. Meanwhile the SenTIP combines HD LCD LED-backlit screen with graphics tablet technology, as a drawing screen with 1024-level pressure sensitivity and wireless passive technology.

The company will also have 2 tablet PCs on show-- the Hanvon HPad and TouchPad. The HPad is consumer-aimed, using Android 2.2 and carrying wifi, bluetooth, 3G, dual cameras and handwriting and face recognition software. The TouchPad is aimed at business users, and uses Microsoft Windows 7. It has a 1024 x 600 screen, 2GB DDR2 memory and 250GB HDD.

Finally there's Hanvon's F710 embeddable facial recognition software-- with a "Dual Sensor" face ID algorithm.
