

iPod Touch Gets A8-Powered Update

Written by Marco Attard
16 July 2015

Apple announces a long-awaited refresh of the iPod media player family-- the first since 2012-- featuring an upgraded iPod Touch complete with iPhone 6 chip and new colours for the Nano and Shuffle.

The latest iPod Touch features a 64-bit A8 processor allowing for better performance, especially when it comes to games. It also carries the M8 motion coprocessor for fitness, step and elevation tracker, and the same 8MP camera as the iPhone 6.

The player comes with iOS 8.4 and Apple Music preinstalled, and will be available in either 16, 32, 64 or 128GB versions.

As for the aforementioned new iPod colours, these are dark blue, hot pink and gold, joining the familiar black and white options.
