---

Corsair-owned Elgato announces the 4K60 Pro MK.2 at Gamescom 2019-- an update on the 2017 4K60 Pro capture card featuring HDR support, as well as game footage capture at 2160p resolution and 60fps.

The 4K60 Pro MK.2 is around half the size of the previous model, yet enables captures to capture 4K video at 60Hz with HDR10 while simultaneously streaming to Twitch at 60Hz. It can also capture 1080p game footage at 240Hz or 1440p footage at 144Hz in the case of dual-PC settings, and supports a maximum bitrate of 140Mbps, higher than that of UHD Blu-ray discs.

Elgato says the card works out of the box with most popular streaming software, including OBS Studio, Streamlabs OBS and Xsplit. Construction is in black galvanised steel, with "slick grilles, prominent port labels and iconic branding."

The 4K60 Pro MK.2 is available now.
