

The "Frameless" AOC Q2781PQ Monitor

Written by Marco Attard
03 February 2017

AOC describes its latest monitor, the Q2781PQ, as one with a "frameless" ultra-slim design with minimal bezels around all four sides and "2mm of casing."

The 27-inch monitor stands on top of an asymmetric stand and features an AH-IPS 2560 x 1440 resolution panel offering wide viewing angles and full sRGB colour coverage. Flicker-free technology promises to reduce eye fatigue, while a DC (Direct Current) backlight system makes more comfortable and stable viewing.

Connectivity comes through x1 VGA, x1 DisplayPort and x2 HDMI ports, and the stand allows for $-2^{\circ}\pm1.5^{\circ} \sim 16^{\circ}\pm1.5^{\circ}$ adjustments.

The Q2781PS is available now. The coming months should see the release of a Rose Gold variant with a back panel "adorned with crystals from Swarovski."
