

InFocus: New Version of Mondopad 55"

Written by Bob Snyder
22 April 2013

The newest **Mondopad** by InFocus maintains all of the original features for business and education markets, but adds important upgrades.

The improved Mondopad features a smaller bezel, allowing for a wider touch area and improved sensitivity across its 55-inch display. The touch capabilities have been improved as well, with the newest version boasting a five-point touchscreen and enhanced application compatibility for current and future software releases.

InFocus has doubled the amount of optical touch sensors in the new Mondopad from two to four for better recognition of touches, gestures and handwriting for one or multiple users. The device comes standard with a solid-state hard drive that operates faster and more reliably than magnetic drives.

The Mondopad also features a digital interactive whiteboard, document annotation, business-class video conferencing and more. It allows users to share, view and control applications for tablets and smartphones, and comes with a full version of Microsoft Office 2010 Suite.

InFocus: New Version of Mondopad 55”

New virtual training is available in two and four-hour varieties, users can learn how they can best apply the Mondopad's features to their specific needs. Session topics may include video conferencing, whiteboard sharing, third-party applications and a wide range of other subjects.

The Mondopad also features the company's recently released version 1.6 software, which allows for annotation in more places and gives users the ability to switch between the Mondopad software and third-party applications. The software also allows for the customization of whiteboard backgrounds and gives administrators the option to require domain logins for increased security. The Mondopad 1.6 software update is available for download now for current Mondopad users from the InFocus website.
