

Kaleidescape Intros Encore Product Lineup

Written by Marco Attard
21 October 2015

Kaleidescape launches the Encore portfolio at CEDIA Expo 2015-- a home theatre product line including the first 4K/UHD player from the company, the Strato Movie Player.

The Strato plays 4K resolution media at up to 60fps, with high dynamic range and lossless multichannel audio support. It carries an optional internal 6TB HDD able to store either 100 4K movies, 150 Blu-ray quality movies or 900 DVD quality movies, and can be paired with other Encore components, such as the Terra Movie Server.

The Terra simultaneously streams 4K movies to up to 7 Strato players (or Blu-ray quality video to up to 15 players), enables system configurations with up to 50 players and provides players with performance-enhancing computing and caching services. Storage comes through 24TB HDD.

Also announced are 2 Alto Movie Player models-- one with a 6TB internal HDD, the other with no internal storage for playback from movie servers. The Alto features a Blu-ray drive and handles Blu-ray quality downloads from the Kaleidescape Movie Store. Speaking of the Kaleidescape Movie Store, the company plans to launch a 3rd generation of the online movie store offering over 11000 movies and 1500 TV season, as well as over 100 4K titles.
