

The Remix IO Android-Powered Home Theatre PC

Written by Marco Attard
27 October 2016

Jide Technology claims the Remix IO is 3 devices in one-- media streamer, PC and games console-- although one can also describe it as an Android-powered home theatre PC designed for use with the latest TVs.

The device supports 4K and HDR content, and is powered by an octa-core CPU promising 4K@60 video output. It also features 2GB RAM and 16GB of internal storage (expandable via microSD card) and runs on Remix OS, a modified version of the Android operating system. As such it should be able to handle most, if not all, Android and Android TV apps.

Interestingly, the Remix IO offers dual use modes-- a TV mode complete with larger app icons and IR remote compatibility, and a Windows-style PC mode ideal for mouse and keyboard use. Wired connectivity comes through HDMI, VGA, x4 USB 2.0 and ethernet ports, while wifi and Bluetooth handle the wireless side.

The Remix IO is currently on Kickstarter, where it already reached a prerequisite \$250000 pledge goal. Shipments are set to start from March 2017.
